This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserscribed[®] by International Gemological Initium (GIA). A LGD has essentially the chemical, physical and optical properties as a mined atomand, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPI (high pressure high temperature) growth processes and may include post growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently available including, binocular microscopes, alamond color masters, non-contact-optical measuring device, a wide range analytical techniques including FIR, UV-VIS-NIR, UV-VIS-NIR, UV-NIS-NIR, DV-VIS-NIR, UV-VIS-NIR, UV-VIS-NI
