This Laboratory Grown Diamond was created by High Pressure High	
Temperature (HPHT) growth process. Type II	

This Laboratory Grown Diamond (LGD) described in this Report has been analyzed, graded and Laserschized<sup>1</sup> by International Gemological Institute (IG). ALCD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGDs are hypically produced by CVD (chemical vapor deposition or by HPH (hig) pressure high temperature) growth processes and may include past growth modifications to change the color. (GI utilizes the most advanced techniques and equipment currently valiable including. bincular microscopes, diamond color masters, non-contact-optical measuing device, a wide range analytical techniques including. [FII, UV-VIS-MI; raman spectracopy, and flucorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a gurantee, valuation nor approviation and by making the report in later tend tight and the report is neither and the report in cludes advanced to the report of the report is neither a gurantee, valuation nor approviation and by making the report (GI advanced security features. This Report is neither a gurantee, valuation processing and by making the report (GI advanced security features).

Comments: As Grown - No indication of post-growth treatment.
