Laserscribed® by International Gemological Institute (IGI). A LGD has essentially the chemical, physical and optical properties as a mined diamond, with the exception of being man-made (a manufactured product). LGD's are typically produced by CVD (chemical vapor deposition) or by HPHT (high pressure high Leurs die rippiculty produced by cvo (cheinical volpha deplasitat) on by nem nigit pressale ingit temperature growth processes and may include post growth modifications to change the color. I Guillizes the most advanced techniques and equipment currently available including, binocular microscopes, adamand color masters, non-contact-optical measuing device, a vide range analytical techniques including. FIR, UV-UIS-NIR, criman spectroscopy, and fluorescence analysis at various excitation wavelengths. This Report includes advanced security features. This Report is neither a guarantee, valuation nor appraisal and by making the report IGI does not agree to purchase or replace the article.
